Nhill Business 3.0 — Application guide

Français : ../fr/nhill-business.md

Nhill Business serves the business: sales, customers, products, stock, purchases, expenses, payments, reports, team and settings. Platforms: Windows 10 and 11 (64-bit), Linux (Ubuntu 24.04, Debian 13), Android 7 and later phones and tablets. Installation: installation-guide.md § 3. Other applications: nhill-pos.md (till), nhill-console.md (operator). The interface is in French or English (labels below: English interface).

> **What you see depends on your role and on the business's plan.** A menu, tab or button appears only if your role allows it **and** the plan includes the feature (invoices, quotes, till, purchases, expenses, several warehouses, several currencies, catalogue import, advanced reports). A feature outside the plan is never shown; the server refuses it too. When the plan changes, rights are updated at the next request.

Real screenshots of version 3.0 (demo business, French interface): `docs/assets/v3/`.

1. First launch

1.1 Server address

No address is built into the application. At first launch, **Server settings** (Welcome screen) asks for the **Server address (API)** given by your provider, for example `https://api.example.com`. **Test the connection** checks it (Nhill server, compatible version, HTTPS required), then **Use this server** saves it on the device. It can be changed from the same screen. If the server requires a newer version of the application, install the update first.

1.2 "My business already exists" (join)

1. Enter the **business code** (`NH-XXXX-XXXX-XXXX`) given by the owner. The code changes regularly (every 30 days by default): if it is refused, ask for the new one. The error message is deliberately the same in every case.
2. Then **"I have an account"** (e-mail and password) or **"I received an invitation"** (invitation e-mail, activation code given by your manager, password of at least 8 characters to choose).

1.3 "Create my business"

1. **Type of activity**: individual entrepreneur (a single user) or company or organisation (several users, roles, invitations).
2. **Identity**: trade name, legal name, sector, country, VAT registration, the legal identifiers that apply to you (RCCM, Id. Nat., NIF…).
3. **Contact details and preferences**: city, address, phone, e-mail, main currency, document language.
4. **Your account** (owner), then review and creation.

No payment method is asked for. The starting plan (usually the free trial, 30 days by default) is assigned by the operator's rules; the dashboard shows the days left. Note the **business code** shown at the end. If a company with the same legal identifier already exists, Nhill never attaches you to it automatically: you can send a **join request**.

2. Main screen

Menu: Dashboard, Sales, Customers (and suppliers), Products & services, Stock, Purchases, Expenses, Payments, Reports, Activity log (or My activity), Settings, Help & support — each according to your role and the plan. At the top: global search, connection state, subscription state, notifications.

Shortcut	Action
`Ctrl+K`	global search
`Ctrl+N`	new invoice (if your role and the plan allow it)
`Ctrl+1` … `Ctrl+4`	Dashboard, Sales, Customers, Products
`F5`	refresh
`Alt+←`	previous screen

The dashboard only shows the indicators of the features included in the plan; on a narrow screen, indicator titles wrap onto two lines.

3. Sales

- **New invoice** (or quote, order): customer, currency, date, due date, lines (product or free line, quantity, price excl. tax, discount, tax). The server recomputes the totals and is authoritative.
- **Draft**: editable, without a number or fiscal value.
- **Issue**: final number (for example `FA-2026-000012`), stock reduced, SHA-256 hash of the PDF recorded; the document **can no longer be modified or deleted**. To correct: **Credit note** (full or partial, possible restock, reason).
- **Foreign currency**: the exchange rate is asked at issue, recorded with its date and source, never recomputed ("several currencies" feature of the plan).
- **Quote**: accepted or declined, then **Convert to invoice**. **Order**: converted to an invoice.
- **Payment**: "Record payment" (cash, Mobile Money, card, transfer, cheque…, reference), never more than the amount due; on a credit note, "Record refund".
- **PDF A4** or **Ticket** (58 or 80 mm): same document, same template as Nhill POS; the file is saved in the device's download folder, under `Nhill`. On Android, **Share** sends the PDF to messaging or e-mail.
- **Connection lost while issuing or paying**: **Retry**; the operation is never recorded twice.
- **DRC, VAT-registered**: Nhill documents are management documents, not standardised invoices. Issue the standardised invoice with your electronic fiscal device (DEF), then **Record DEF reference** (NID, authentication code, number) on the Nhill invoice for reconciliation. Nhill certifies nothing.
- The plan's monthly document limit, if any, never blocks a credit note.

4. Customers, products, stock, purchases, expenses

- **Customers and suppliers**: contact details, NIF, payment terms, notes; the record shows the balance and documents (suppliers: if the plan includes purchases or expenses).
- **Products and services**: reference, name, unit, sale and purchase prices, tax, barcode, alert threshold. CSV export; **all-or-nothing CSV import** (errors listed per line) if the plan includes it. The plan may limit the number of products.
- **Stock**: quantities change only through movements (sale, received purchase, credit note, adjustment with a reason, transfer between warehouses if the plan allows several warehouses), each with its author.
- **Purchases**: draft → **receipt** (stock entry, purchase price updated) → payment.

- **Expenses**: amount, tax, category, supplier, paid or not, **receipt** (PDF, PNG or JPEG, 5 MB), within the plan's storage limit.

5. Reports and activity log

- **Reports** ("reports" permission): sales journal ("Issued by"), payments ("Recorded by"), expenses, stock movements, receivables and payables to date; with the plan's advanced reports: sales per product (**estimated** margin) and activity per employee. Any period, **CSV** or **PDF** export. Amounts are always shown **per currency**, never converted or added across currencies.
- **Activity log** (owner, administrator, accountant): every action of the business, filters by employee, action type and period, CSV/PDF export. Other roles see **My activity**. The log is kept by the server and can be neither modified nor deleted, not even by the owner; consultations of statistics by the operator also appear in it.

6. Settings

Tab	Content	Who
Establishment	identity, time zone (dates of documents and sessions), VAT, legal identifiers, logo (PNG or JPEG, 2 MB), document language, payment terms, tax rounding, payment instructions, **notices printed on every document** (you write them; Nhill neither writes nor checks them), footer, selling below zero stock; **Export all my data** (owner)	owner, administrator
Establishment code	show, copy, renew now	owner, administrator; manager read-only
Team	members, roles, deactivation, invitations (activation code shown **only once**), temporary password for a member (§ 8), number of users allowed by the plan	owner, administrator
Subscription	§ 7	owner, administrator
Taxes & accounts	tax rates (a rate cannot be changed: create another one), cash and bank accounts, exchange rates	owner, administrator
Point of sale	tills and cashiers, payment methods, maximum discount, receipt, till promo codes, sessions and X/Z reports (nhill-pos.md § 1)	depending on the role, if the plan includes the till
My account	name, phone, language, theme, password, "Remember me on this device", sign out	everyone

Export all my data: one ZIP archive with all the business's data (CSV and JSON files), the stored files (logo, receipts) and a list of contents with hashes. Available at any time to the owner, including in read-only mode. The archive contains personal data: keep it safe.

Roles: owner, administrator, manager, salesperson, accountant, read-only, till supervisor, cashier. Permissions in detail: api-reference.md ("Permissions per role").

7. Subscription (owner and administrators)

- **Current subscription**: plan, period and days left, features **included in your plan** and usage of the limits (for example "3 of 5 used").
- **Plans**: plans published by the operator, prices per duration and currency. If no plan is published, the screen says so.

- **Choose this plan**: summary computed by the server (price, promo code, credit for unused days, tax, total). Upgrade: immediate, unused part deducted. Downgrade: paid now, applied at the end of the period. Renewal: the new period starts at the end of the current one.
- **Payment**: through an online provider when the operator has enabled one, otherwise bank transfer or Mobile Money with the reference shown, confirmed by the billing team. Nothing is charged before confirmation; an unpaid request expires.
- **Automatic renewal**: only with your express consent (checkbox), when the plan allows it and a compatible provider is connected.
- **Reminders** before the due date, then a **grace period** if payment is not confirmed; then, depending on the plan, a fallback plan or **read-only** (viewing and export remain possible).
- **End of the contract**: 90 days of read-only to export your data, then permanent erasure by the operator.

8. Password, sign-in and security

- **Employee**: if you forget it, the administrator or owner creates a **temporary password** (Settings › Team › Reset the password), shown only once and given in person or by phone; your sessions are closed; at the next sign-in, you choose a new password (at least 8 characters). An administrator cannot reset the owner or themselves; only the owner resets an administrator; an account used in another business goes through the e-mail procedure.
- **Owner, administrator, account of several businesses**: **Forgot your password?** on the sign-in screen sends an 8-digit code by e-mail (single use, limited validity); the message shown is the same whether the address exists or not; every session is closed after the change.
- **Remember me**: session token kept in the system's secure storage (Windows Credential Manager, Android Keystore, Linux keyring), never the password; tick it only on a personal device; signing out erases it.
- Without a connection, you can neither sell nor invoice; nothing is lost.
- Never put a password, business code or card number in **Help & support**.

9. What Nhill does not do

See user-guide.md § 3 (tax, general ledger, payments, sending documents, connection, devices).
