Nhill 3.0 — User guide

Français : ../fr/guide-utilisateur.md

Since version 3.0, each application has its own guide:

Application	For whom	Platforms	Guide
Nhill Business	the business: sales, customers, stock, purchases, expenses, reports, team, settings	Windows, Linux, Android	nhill-business.md
Nhill POS	a business's cashiers	Windows, Linux	nhill-pos.md
Nhill Console	the platform operator (private application)	Windows, Linux	nhill-console.md

Real screenshots of version 3.0 (demo business, French interface): `docs/assets/v3/`.

1. What is new in version 3.0

- **Plans**: each business only sees the features included in its plan; a feature outside the plan appears nowhere and the server refuses it. Limits (users, tills, warehouses, products, documents per month, storage) and their usage are shown in Settings › Subscription.
- **Server address**: entered and checked at the first launch of each application, changeable afterwards (no address is built into the applications any more).
- **Till invoices**: Nhill POS can issue an A4 invoice in the name of an identified customer, with the same numbering and template as Nhill Business. All documents (A4 or 58/80 mm receipt) use a single template.
- **Notices on documents**: the business writes the notices printed on every document (Settings › Establishment).
- **Full export**: the owner downloads a ZIP archive of all the data, at any time, even in read-only mode.
- **Android**: **Share** button on a document.
- **End of contract**: 90 days of read-only to export, then permanent erasure by the operator.
- **Searches**: `%` and `_` are searched as typed.

Previous versions: changelog.md.

2. Common rules

- Passwords: at least 8 characters, not a too-common password; no periodic change imposed. The eye button shows or hides what you type.
- "Remember me" keeps a session token in the system's secure storage, never the password.
- An operation interrupted by a cut is retried without being recorded twice.
- Language (French, English) and theme (light, dark, automatic): Settings › My account.

3. What Nhill does and does not do

Topic	What Nhill does	What it does not do
Tax obligations	tax rates, legal identifiers and notices on every document; `CD` profile (DRC, to be validated by a tax adviser) and generic `INTL` profile; reference of an official document (for example the DGI's DEF) recorded on the invoice	**certified in no country**: no certified till, no regulatory e-invoice, no fiscal device

Topic	What Nhill does	What it does not do
Accounting	journals and CSV/PDF exports (sales, payments, expenses, receivables, payables)	does not keep the general ledger
Payments	cash, card, transfer, cheque, Mobile Money recorded with their reference	not connected to Mobile Money operators or card terminals
Sending documents	PDF to save or share (Share button on Android)	no direct sending by e-mail or SMS from the application
Connection	a mobile connection is enough; an interrupted operation is resent without duplicates	without a connection, you can neither sell nor invoice
Devices	Nhill Business: Windows, Linux, Android; Nhill POS: Windows, Linux	no till on Android or iOS
