Demo script (15 to 30 minutes)

Français : ../fr/07-script-demonstration.md

Equipment: computer or tablet with Nhill Business and Nhill POS installed, connected to a **demo business** (fictitious data, all marked "(démo)", never a real customer's data). Before the visit: add 10 to 20 of the prospect's items (names and prices they gave), check the connection, charge the device.

Only show what exists in the installed version. Never enter a third party's real personal data during the demo.

Flow

Min.	Step	What you do	What you say
0–2	Restate the pain	recall what the prospect said (till, stock, sellers)	"You told me the evening till takes you an hour. Let's see what it looks like with Nhill."
2–6	A sale at the till	Nhill POS: open the till with a float, scan or tap 3 of the prospect's items, `F9`, cash payment with change, PDF receipt	"Stock has already gone down, and the sale is under the cashier's name."
6–9	Control	try a discount above the limit → supervisor approval request; closing: the cashier enters the count without seeing the expected amount; Z report with the difference	"The cashier can't adjust the count to make it match."
9–12	Stock	Nhill Business → Stock: quantities, alert threshold, movements with author; a received purchase	"You know what will run out before it does."
12–14	Owner away	on a second device (or phone): dashboard, "activity per employee" report, activity log	"From home, you see what happened in the shop."
14–15	Outage	explain (without faking an outage): an interrupted operation is retried without duplicates; backup notebook for a long outage	"Nhill needs the Internet to record; it never counts twice."
15–20	Questions	answer; note objections	see standard answers in `05` § 1
20–25	Option: invoices and credit	invoice to a customer, partial payment, balance due	"You know who owes you what."
25–30	Close	propose the pilot, dates, agreement	"We can install on [day]. It takes half a day and the list of your items."

Watch-outs

- **VAT**: if the prospect is VAT-registered, say it before the end: Nhill does not produce the DGI standardised invoice.
- **Price**: not yet set; free pilot; prices published before any invoicing.
- **Platforms**: check what is actually delivered (Windows, Linux, Android) in `release/V2.0.0/` before mentioning it.
- **What Nhill 2.0 does not do**: sending e-mails, resetting a forgotten password, built-in Mobile Money payment of sales, general accounting, payroll, working without Internet.

Demo report (fill in the same day)

Field	Answer
Date, place, duration	
Business, sector, commune	
People present (role)	
Confirmed pains	
Positive reactions (exact quotes)	
Objections and answers given	
Unanswered questions → to whom, by when	
Equipment observed (devices, Internet, power)	
Qualification score (`04` § 3)	/20
Decision	pilot / follow up on [DATE] / not interested
Consent to messages (channel, date)	
Next action and date	

Copy into `trackers/suivi-prospects.csv` (“score”, “statut”, “prochaine_action” columns).
